

Making a VeloWalker

Supplies needed:

1 baby carrier (bought online, brand Chico, old model)		A
1 laptop holder for on your lap (e.g. IKEA)		B
4 shackles		C
4 carabiner fastener		D
1 iPad/tablet holder		E

<p>1 piece of round isolation material</p>		F
<p>These clasps from the baby carrier</p> <p>Plus 3 meter of band for example a suitcase belt but other straps also work</p>		G
<p>You cut away a large part of the baby carrier</p> <p>Make sure you are only left with the carrier part</p> <p>At the chestclasps you sew both left and right adding two straps. Leave them long, and don't cut them shorter until you know for sure how long you need them to be.</p> <p>At the hipband you also sew straps. This is so the edge can be properly aligned to your body.</p>		
<p>Meanwhile you remove the pillow from the laptop holder.</p> <p>Using a drill, you drill 4 holes at the edges (see photo C) of the laptop holder.</p> <p>At these points you attach the shackles These have to be large enough to move around the edge to the hole AND have the carabiner fastener attached to them..</p>		
<p>Glue the isolation band to the body side of the carrier, then cut it to appropriate size. (photo F)</p> <p>If the glue doesn't succeed in attaching the isolation material, then 4 bands at strategic places should do the job as well. To attach them, you drill little holes for the straps to go through.</p>		

Place the velotype on the carrier and determine the place for the iPadholder.

Attach the holder to the carrier using small bolts.

When everything is attached, you can put the VeloWalker on over the head. The best way is to first put on the VeloWalker, and then placing your velotype and tablet on the carrier to avoid risking them to fall off.
